## HOW TO MAKE FABRIC PILLOWS AND BED SHEETS.

### Pillows:

Cut out pillow (part n. 10) do not fold it now but carefully roll the piece into a ball to crumple the paper. Carefully unroll the ball and flatten the piece. repeat this procedure 4-5 times as soon as the paper looks like used up.

Now you can fold along line a-a and glue labels A and B leaving the label C open.

Now you will have build a little bag where you can put cotton wool in. It will be soft like a real pillow.

Now just fold C label inside and glue it to close the pillow. That's it!

### Bed sheets:

After you printed the sheets on both sides as described on printing instructions, cut out the sheets. Just roll into a ball as you did with pillows and unroll.

Repeat this procedure 6-8 times until the paper looks like fabric. Then to flatten and stretch the sheets you can use the iron with low power and iron it.

You now are ready to “make “ the bed!
